*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

■ Key Words: Asset cloud platform, sharing property, accelerated circulation of global asset, blockchain, smart contract, big data, AI, Physical assets exchange

I. Who we are

i-house.com has been positioned as a global real estate blockchain cloud platform since its preparation stage. Its mission is to integrate global real estate markets with the blockchain mechanism. Through joining blockchain and real estate, the real estate developer, financial institutions and their users can be connected and the transaction of real estate can be made a part of “digital credit society”, therefore constituting a pivotal supporting part of the economic development. All owners and investors will become beneficiaries of i-house.com real estate blockchain.

IHT is a smart contract technology and distributed accounting technology developed for the purpose of splitting real estate under i-house.com, which utilizes blockchain’s intrinsic advantages such as trustless mechanism, anti-tamper, co-supervision and traceability. Through IHT’s smart contract, large real estate can be split and distributed to financial institutions. In this way, the user will get the opportunity to invest small amounts of money and benefit from real estate, and ensures security and low risk of investment.

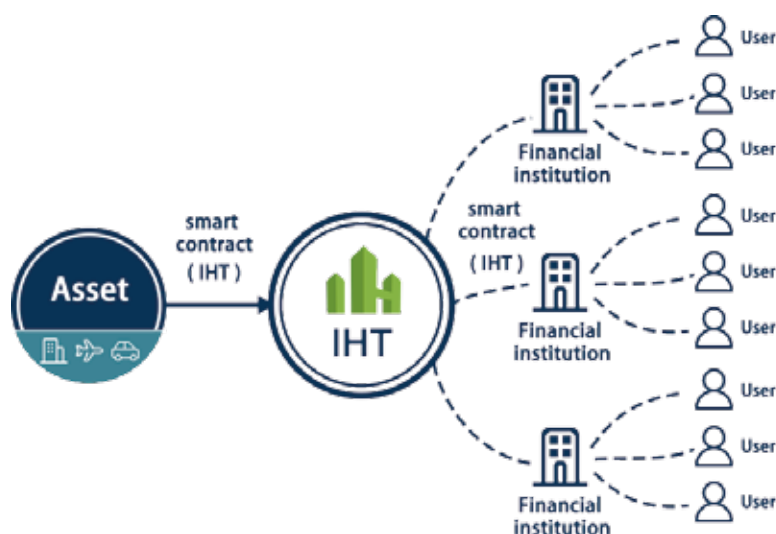

IHT1.0 service is positioned as PaaS, Protocol-as-a-Service, which offers a standardized initialization and publication process for ATO ((Asset Tokenize Offering) to asset owners, acting as a neutral agent for asset owners and financial institutions so that both parties can search and make deals. Meanwhile, IHT will continue progressing to 2.0BaaS, Blockchain as a Service, and act as an asset segmentation and management platform for the construction of mobile information applications for financial institutions. Finally, IHT3.0 will evolve into a financial exchange based on physical assets to improve the liquidity of physical assets.

From the current situation of commercial development, the real estate developers and financial institutions have shown great enthusiasm. More and more real estate developers and financial institutions are willing to actively participate in the i-house.com project, and look forward to the i-house.com blockchain project IHT on-line as soon as possible.

In a greater sense of IHT future blueprint, aside from real estate, all assets that have trading value will be incorporated into the IHT blockchain platform such as aircraft rental, artwork, antiques and bonds.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset’s local fiat.

II. IHT Ecosystem Design

IHT uses its own smart contract and distributed accounting technology to connect the asset side and the financial institution side. Large assets can be split and distributed to multiple financial institutions through the IHT smart contract. Users, through financial institutions, can invest in small real estate split by IHT smart contract. IHT, as the center of the connection of two ends, cannot be changed by any individual or organization after the asset is split and bound, including the IHT itself. Therefore, through IHT blockchain ledger, it can be ensured that users' investment will be firmly bonded to the pointed assets, so that investment is more secured and returns are more stable.

III. Development Status of Global Real Estate Market

According to Savills Global Research Report "Trends in Global Real Estate Market in 2016", the total market cap of global real estate is approximately worth USD217 trillion, which roughly equals 2.7 times of global GDP, 36 times of global gold mining worth (6 trillion) and accounts for 60% of global main assets, hence rendering real estate the top saving and investment choice for countries, corporations and individuals.

Global Asset

Asset	Investable (Tr\$)	Un-investable (Tr\$)	Total (Tr\$)
Total Real Estate	81		217
Residential Property	54	108	162
Global High-end Commercial Real Estate	19	10	29
Agriculture Land	8	18	26
Other Investment	-	-	155
Stock Equity	55	-	55
Unpaid Securitized Debt	94	-	94
Gold	-	-	6
Global Main Asset	-	-	372

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

Therefore, real estate investment can be called the most influential investment tool in global economy. At the same time, it is closely linked and under biggest impact of global currency market and investment climate.

Residential property accounts for over 75% in global total real asset and is the most important part of the real estate market. Since residential property is mostly self-occupied properties, its ownership is most dispersed and closely linked with the wealth of ordinary people. The investment potential of residential property is yet to be fully unlocked due to its poor liquidity. The global real estate market and global economy as a whole will be greatly improved if the residential properties' liquidity were accelerated.

From the point of distribution of space and value, the world's real estate is unevenly distributed. The western countries account for a higher per capita proportion of the world's real estate. In North America, for example, accounts for only 5% of the world's population, but residential value accounts for 21% of the world's total and commercial property value accounted for more than half of the total value of commercial property worldwide. Therefore, the use of reverse thinking, a new type of real estate investment model, is very likely to promote the real estate investment liquidity of Asia, Africa, Latin America, Middle East and other regions, thereby producing a huge real estate investment market.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

In combination with the advantages of blockchain and the global development trend, blockchain real estate investment model will likely cover the future global real estate investment at a sweeping rate, and eliminate the traditional real estate investment model. IHT, based on this development inflection point, has fragmented the property right via smart contract referring to the property securitization approach of REITs, and has pioneered a blockchain + smart contract + REITs business model. It will reverse the global circulation of real estate, thereby affecting the global economic development.

IV. IHT Application Scenarios

1. On-line Application of IHT Blockchain

Real estate transactions, in the global investment market, especially the bulk of real estate transactions, is facing a problem, that is how to make asset transactions light, efficient and transparent. In the past, only large asset packages were able to achieve the purpose of securitization of real estate assets through the means of REITs.

IHT draw on traditional real estate investment tools, such as REITs, where the asset holders can through the early audit, risk control and prediction of asset package income by the third party, rapidly trade the real estate assets ownership and income rights. Through this process, the following advantages can be represented. First, it's to make real estate investment downsizing, dynamic and transparent. Second, it has very high transaction convenience. Third, information is transparent.

IHT has the following advantages

(1). Make real estate investment downsizing, dynamic and transparent.

Traditional real estate transactions are all in large scale, the problem is more serious when encountering large offices, shopping centers, hotels, which need to be unified management to maintain the highest value. The use of IHT platform, greatly reduces the investor's investment threshold of the subject. IHT in this regard fully supports the process of digitization of real estate ownership. IHT's trading platform and service platform provide the management tools needed by asset holders and investors.

(2). High transaction convenience.

IHT by asset digitization uses blockchain to represent this convenient trading process. After the listing of the project, it will greatly improve product liquidity and cash-ability.

(3). Information transparency.

All transaction records are detailed through the blockchain, and the books can be consulted upon authorization to make the entire transaction chain clear, including details of asset operations, which can also be placed on the IHT platform to make sure the information transparency. The use of IHT's smart contract platform, all of the trading matters related to IHT platform can be easily kept in distributed records through the platform, and achieve investment returns are more clearly, so as to achieve assets more safely.

(4). IHT can fragmentize relatively small property rights, and shorten the listing cycle.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

IHT makes housing digital assets easier and simpler. Using the blockchain technology of IHT platform, the assets or some of the assets can be changed into digital assets quickly. The traditional real estate investment tools, such as REITs, need a large number of listed preparations in advance, and the annual maintenance cost is also very high. All of the above decided the package of assets controlled by these traditional tools must have a relatively high amount limit, and it can be implemented. IHT offers relatively small terms, but also the possibility of asset transactions.

2.Acquire sharing economy assets

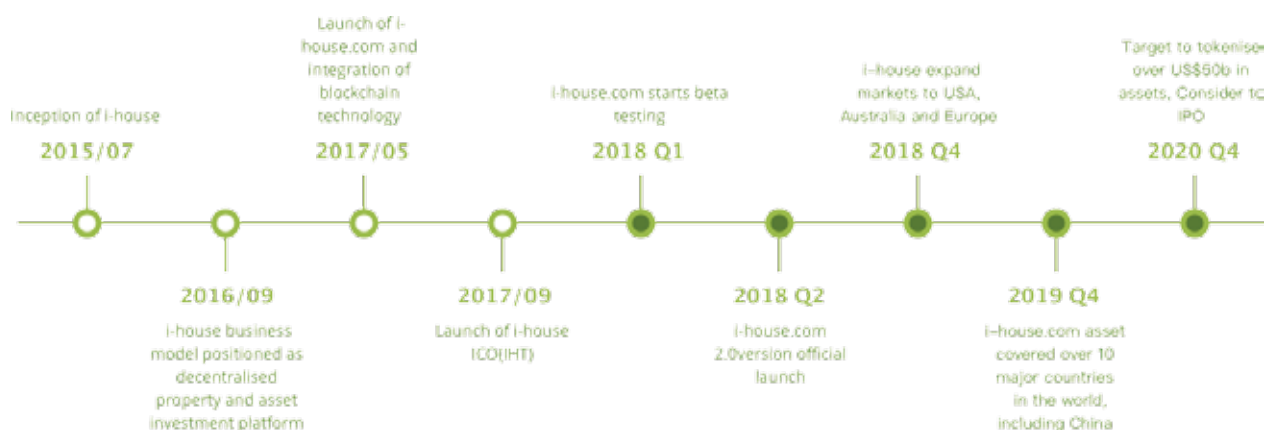

Property under the IHT's management will be hosted by i-house.com, forming new off-line sharing apartment, hotel or co-working space, to form a new asset class for sharing economy. We can provide rental services, community services, property management, smart household services, and so on.

With proper use of IHT, the sharing economy assets managed by i-house.com is expected to grow rapidly. All of these sharing economy assets will be crypto friendly and make use of IHT to help the payment, booking and valued services. The assets will be linked with Airbnb.com, Booking.com to generate income for the asset owners managed by IHT.

IHT will expand to commercial building assets in the near future and work close with the blockchain startup to form a crypto friend co-working space, and the assets will be also managed IHT smart contract.

Our ultimate goal is, everyone can own partial of the sharing economy assets, like hostel posted in Airbnb or co-working space managed by Wework, enjoy the rental income generated. This is what we called "The New Way of Asset Management"

V. Milestone

VI. Product Form & Design Principle

1.Usage of the IHT wallet

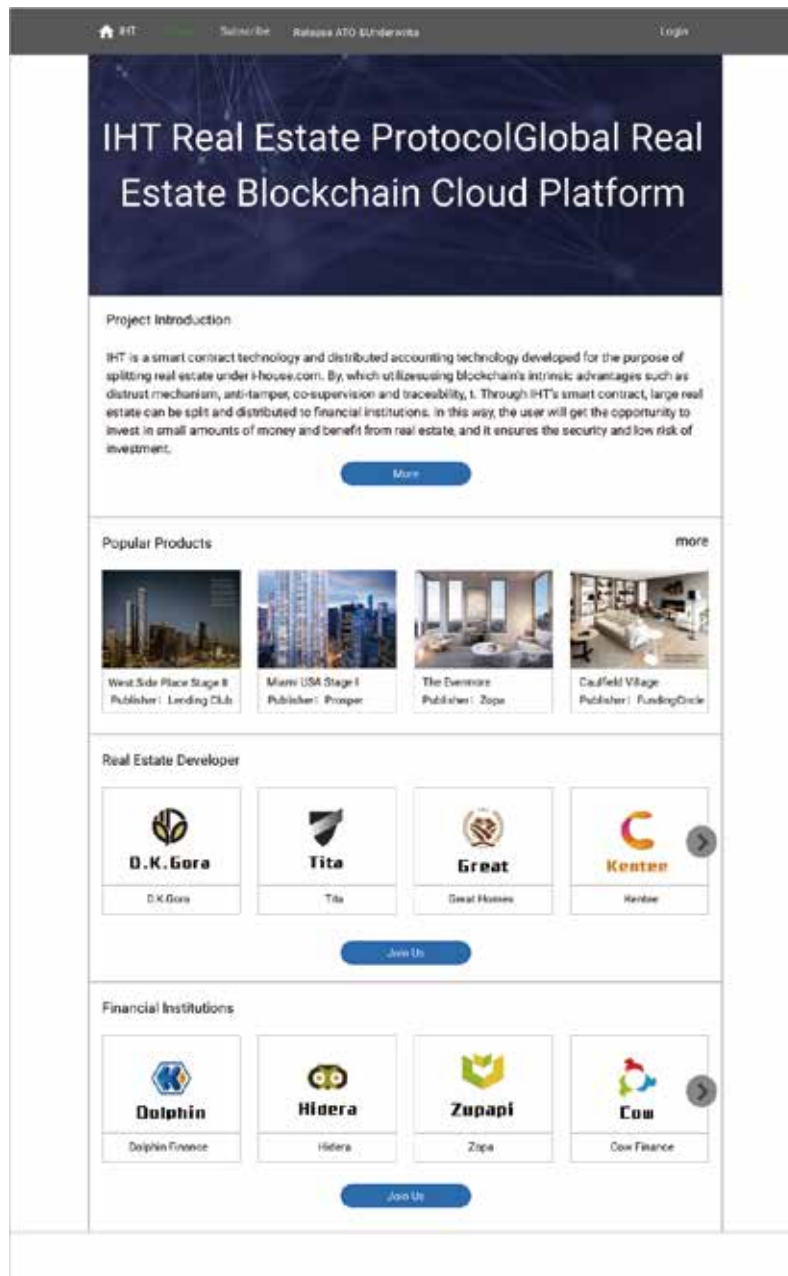

ATO (Asset Tokenize Offering) is the order of the asset party to launch a split. It is used

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

to generate asset split and it is recorded on the kernel ledger of IHT. All property rights and usufruct rights of the transaction shall be conducted under the asset's local fiat. IHT consumption in the wallet is only an inducement mechanism of ATO.

2. How can property developers launch ATO on IHT platform?

After getting the qualification certification (proofs of legitimacy and authenticity) on the IHT platform, the property developers can obtain the right to issue ATO.

*The above developers, real estate and financial institutions are only for displaying, it does not represent the establishment of a partnership with i-house.com

When the property developer issues ATO, it is necessary to make clear of the specific circumstances of the property (such as real estate, address, area, property right period and other relevant conditions), the sale of real estate, whether share repurchase, in a

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

certain period of time, valid duration of the subscription time and annual effective yield.

After determining the share, before they can officially publish the ATO, the property developers need to use the IHT in the wallet to act as an inducement mechanism.

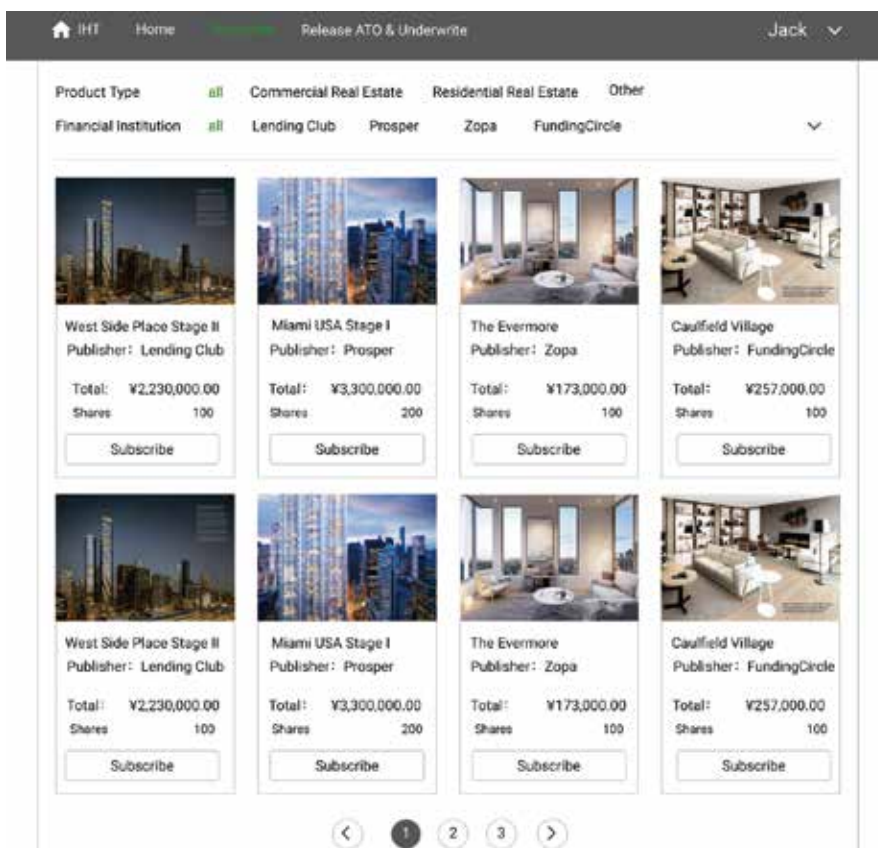

3. How can financial institution underwrite ATO assets on the IHT platform?

After the financial institution has registered on the IHT underwriting platform, they can find the most suitable asset through screening and checking the classification of the asset. IHT will be used as an inducement mechanism on underwriting shares of ATO assets. The specific quantity of IHT depends on the complexity and terms of each ATO.

After the completion of underwritten, financial institution can generate many sub-products from its original shares and release on its own platform and show it to users on the display portal of IHT.

4. How can investors subscribe shares of ATO?

After the financial institution released sub-product on its own platform, users can subscribe it through the sale portal, or subscribe on IHT platform which will skip to the sales page of financial institution. The sub-product displayed on IHT platform will be recommended according to user's personal interest and investment ability.

*The above developers, real estate and financial institutions are only for displaying, it does not represent the establishment of a partnership with i-house.com.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

5. Through the ATO and trading on IHT platform, users can obtain a number of profits :

- (a) Through transactions on the financial institution's platform, users can obtain fiat profits from the real estate premium;
- (b) users can gain profits from the IHT premium by trading IHT in their wallets;
- (c) When a real estate developer launches an ATO , the developer will confirm an annual yield of the corresponding property. The user will then receive the annualized profits of their purchased share by the way of fiat. The specific annual yield or interest rate will vary on depending on each project. All of the above will be recorded on the IHT kernel ledger.

*The above developers, real estate and financial institutions are only for displaying, it does not represent the establishment of a partnership with i-house.com

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

The specific business process diagram is as follows

1. The asset can be split into many parts and release on IHT platform and then underwriting by financial institutions. e.g. One asset of Wanda is split into 99 shares, 59 shares are underwritten by CreatEase, 20 shares are underwritten by Haoxiang, 20 shares are underwritten by Licaitong and so on.
2. Financial institution can chose to underwrite many shares.

Examples of specific forms of operation are as follows

Roles: asset owner A financial institution B, C, D individual users, E, F, G

Asset owner A has 1 properties. The value is 1000W. Through releasing ATO on the IHT platform, the property is split into 100 shares and each value is 100K. Asset owner A sets up the repurchase period as 1 year and the annual return at 10%.

After the ATO is released on the IHT platform, financial institution B can underwrite 50 shares of it, and C and D can underwrite 25 shares of it respectively.

After B underwriting 50 shares, it can package 25 shares and generate a new financial product. This new financial product can be named #1 and its total value is 250w. it can be sold to member E, F, G, on its own platform.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

6. Economy Model of cryptocurrency

Quantity of IHT Paid by Asset Owner= (Asset Value of ATO* Percentage of service fee)/ Price of per IHT

Essentially, the Quantity of IHT paid by asset owner is negatively related to the price of IHT. When launching ATO, the platform charges 1% of the total assets value which will be paid by the equivalent amount of cryptocurrency IHT as a service fee. Therefore, when the IHT is showing an uptrend, buying IHT ahead of time is an effective way to save payment.

Expected return:

With the expansion of block chain applications to all walks of life, the application and demand of block chain in the field of real estate will continue to rise. As a pioneer in the field of property block chain, the market size of i-house.com will continue to expand. As a result, profits will rise as well.

In order to ensure the growth of the market value of the IHT, i-house.com will continue to use 30% of liquidated service charges per quarter for the repurchase of IHT and subsequent burning. The supply of IHT is fixed, so with the recurring repurchase and burn cycles, circulating supply of IHT will continue to decrease as a deflationary cryptocurrency. As a result, the value of IHT will continue to grow.

VII. Technical Support:

Ethereum based system provides Turing complete smart contract framework cored by automated execution of “non-static, functional and quantifiable” contracts between participants. The execution environment responds to input, events, stores value, activates logics to drive state change, and output results to finalize contract intent.

Like a trusted escrow, it maintains temporary assets, and operates according to the contractual enforcement to ensure participant obligations are satisfied at the successful termination.

The following diagram shows smart contract in action: a piece of code (smart contracts) are deployed in a ledger which can be shared and replicated. It can maintain its state, drive control flow, receive external inputs/events and make state transition according to logic outlined in the contract.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

The account is the underlying unit of the smart contract, and the blockchain tracks the status of each account, so the state transitions on the blockchain at the end of contract execution reflecting the final value in the corresponding accounts. The account is divided into an external account and a contract account. The difference is, the external account is associated and controlled by human beings while the contract account is composed of internal control encoding. The contract account is "controlled" by humans, since it is programmed with a specific address of the external account, and human the user who holds the private key to control access to the external account and indirectly to the contract account.

IHT asset exchange smart contract, based on the above smart contract principles and framework, is the core trading module in the IHT asset exchange platform.

VIII. Marketing Plan

Key Projects of 2018 Q1:

i-house.com + IHT Launch Event

Estimated location: Hongkong

Estimated number of participants: 500

Projected media dissemination: 300 domestic and overseas mainstream media Estimated total population coverage: 5 million passengers +

Routine Plan:

Block chain Summit Forum: 4 times a year, 1 activity per quarter, mainly in Hongkong, Australia and the United States

Activities:

Event guests: invite experts in this area mainly.

Activity theme: share the dynamics of blockchain, and introduce the current situation and development trend of i-house.com and IHT;

Activities: partners and interested partners in the real area and financial institutions

Propagation and Coverage:

The scene will be broadcasted on a live platform, counting according to each platform which has 100,000 viewers, 5 platforms are expected to have 500,000 viewers.

Later period: Media Communication (public relations dissemination on 30 mainstream media in China plus public relations dissemination on 150 overseas mainstream media. It is expected to cover more than 5,000,000 viewers.

IX. Fund Raising and Application Plan

1. IHT token mechanism

IHT is issued by token sale with an upper limited set, accounting for 35% of the total tokens generated. For more information, see Chapter below. IHT total supply will be set

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

as: 100,000,000 IHT. 35% tokens will be used in token sale. 1ETH = 350IHT. The tokens which aren't sold in the token sale will

2. IHT Token Sale Structure

Seed (Invite Only): Early Contributors & Advisors

- \$3mm,

Private Pre-Sale (Invite Only): Strategic Partners

- \$15mm,

Please consult IHT Team for private pre-sale bonus structure

Public Pre-sale:

- \$7.5mm 15% Bonus
- 50% principle Lock up for 3 months, Bonus Lockup for 3 months
- individual minimum 50ETH

Crowd-sale:

- \$9.5mm
- individual maximum \$ 10K
- *No lock up

3. IHT Supply Distribution

Tokens issued will be distributed as follows:

- 35% will be put into circulation via the token sale
- 40% reserved tokens are representatively held by the foundation
 - 20% for the sustained development of the foundation
 - 20% for the ecological deployment
- 15% owned by all employees of the foundation
- 10% owned by the early Investors

Additional Terms:

- 30% of the foundation's reserve will be locked up for 24 months.
- the IHT Token held by the early investors will be locked up for 6 months.
- employee tokens will be subject to a 6 months cliff and a tri-monthly vesting over a period of 24 months starting from token sale close.

4. Capital usage budget

- 10% - legal fees on token sale raising.
- 10% - domestic and international publicity & Ecological Construction
- 15% - existing R&D team's operation
- 15% - recruiting new R&D operators
- 50% - prepaying the tokenized assets to speed up assets acquisition

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

5. Compliance

IHT Token refers to Litecoin and other well-known encryption of digital coin, and a nonprofit foundation named Public Company Limited by Guarantee in Singapore. The main task of the foundation is to publicly, fairly and transparently operate the state of IHT, and support the development team. The solution of found management and the register place will be chosen upon the legal advice.

6. Token risk

IHT token has no intention of being an investment platform. IHT is the digital currency that drives users to use the products in the platform.

7. Project risk

The same as any project, the development and execution of our platform may have the risk of delay or even failure. Although the core team has a good record in research and development and business management experience, this is not a guarantee for success. The team will strive to implement milestones outlined in the project roadmap and will publish our progress and challenges as transparently as possible.

8. Digital coin risk

Compared with other assets (such as stocks, bonds, and even real estate), the volatility of digital coin is dramatic. Please do not buy IHT tokens over the amount you can accept. The best thing to do is to diversify your portfolio and make digital coin a reasonable part of your assets. This does not constitute an investment advice, purely common sense. Like any blockchain, please take the time to understand our projects and visions. Our goal is to finance from like-minded people who want to actively participate in our open research platform.

9. Regulatory risk

Digital currency is seen as a grey area of regulation in china. The regulatory environment for blockchain and digital coin is still at an early stage of development. We will do our utmost to comply with the development of all legal and regulatory policies, but we cannot foresee how the regulations will affect our project and platform development.

In China, IHT will strictly comply with relevant laws and regulations, including, but not limited to, real estate, finance, securities and other related laws and regulations. In the presence or occurrence of relevant registration, approval, filing and other procedures, IHT will strictly follow the procedures to perform the relevant procedures. At the same time, IHT will strictly comply with the current laws and regulations relating to promoters' restrictions and foreign exchange control.

In any area where IHT carries out the relevant blockchain business, IHT will comply with local laws and regulations, including, but not limited to, registration, approval, filing and other related procedures.

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

X. Team Profile

Ricky Ng---Chairman and Founder

Chairman and founder of I-house.com & I-house Token(IHT), the first blockchain real estate cloud platform worldwide.

Co-founder, Director of McfeeCC, one of the largest crypto fund founded in 2017.

Co-founder of Iclick Interactive, one of the largest digital advertising platforms in greater China area, created an advertising myth of 1 billion RMB per year, major partner with Baidu and Tencent in China and overseas.

Former Senior Business Manager in Yahoo Asia – Yahoo! Search Marketing; Professional in digital marketing with more than ten years of practical experience in digital marketing and Entrepreneurship. Bachelor of Engineering, Ecommerce and Financial Engineering.

Evan Kim – Chief Operating Officer

He has nine years of experience in traditional media industry, and six years of Internet industry experience, including seven years of experience on the position of regional general manager, ever serving as the former Marketing Director of Nanchang Wanda cultural tourism city of Wanda Group, responsible for marketing and related project management of Nanchang project.

Nana Chen---Chief Marketing Officer

14 years of experience in the area of marketing. Senior Marketing Director of Games in Baidu, clients include Perfect World, Tencent...etc. Senior Media Director in iClick, in charge of working with all media including Baidu, Tencent, 360, Sogou...etc.

Eric Yao—— Chief Blockchain Officer

Master's degree from the University of Washington, and Bachelor's degree from California Institute of Technology. Twenty-two years of research and development experience in Microsoft in Seattle (U.S.A) and CAE (the Chinese Academy of Engineering). Senior technical team manager, in charge of technical development work related to Microsoft, office, office365, exchange, SharePoint and windows.

Kevin Leung --- Chief Financial Officer

8 years of experience in Real Estate industry; GM of Foresea Asset Management Ltd, a commercial property consultancy company; GM of Shopping center in Beijing MTR Corporation Ltd.

Henry Yu --- Chief Legal Advisor

Mr. Yu is one of the founding partners of L&Y LAW OFFICE. He obtained his law bachelor degree in England and is qualified as a solicitor in both England and Wales and Hong Kong. Mr. Yu has also obtained the qualification from the Chartered Institute of Management Accountants.

Mr. Yu was the Deputy Head of Legal Counsel of a major investment bank after he had worked for various international and Magic Circle law firms. Mr. Yu has rich experience in

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

handling legal matters relating to commercial law, corporate and commercial transactions, and foreign investment, including IPO, private equity investment, mergers and acquisitions, and financing.

Over the years, Mr. Yu's enthusiasm for legal matters and his insightful views have been affirmed widely by various professional bodies. Mr. Yu is a member of the Technology Committee of the Law Society of Hong Kong, and is also the Hon. Legal Advisor to The Hong Kong Federation of Innovation and Invention, Hon. Legal Advisor to the Institute of Financial Technologists of Asia and Hon. Legal Advisor to the Bitcoin Association of Hong Kong. From time to time, Henry represents the Bitcoin Community at meetings with the Legislative Council members, the HKMA and the FTSB.

JC Xu ---Blockchain Consultant

He is the co-founder of digital asset fund Badwater Capital, working at DFJ Dragon Fund, located at Silicon Valley, which is a China's well-known early venture investment fund, and engaged in venture investment in the TMT field. In 2014, just 22 years old, he created the spark technology, a knowledge and skills sharing platform, which acquired a million yuan of venture capital investment from IDG, graduated from Kr Space III Stage, and exited after the progress of acquisition in 2016. He studied in Indiana University-Kelley School of Business in U.S. and Draper University of Heroes in Silicon Valley.

Neil Jiang --- Senior Product Manager

Senior Product Manager, independently responsible for Aladdin's entire platform demand planning of "iroommate", "jobin" and other products. Been responsible for the short video products "seconds shot", and completed the whole platform requirement rules of the app, background and web pages and so on. Independently responsible for the incubation and iteration of "Clans", a two-dimensional community product, and the iterative of "Maotuan Anime", a two-dimensional video product.

Ares Xie --- Leader of Technical Department

8 years of back-end development experience, proficient in server cluster, big data, system architecture design, served as the head of China's largest page tour company platform, responsible for the advertising system which delivery capacity is worth CNY 70 million, as well as several open source projects.

Catherine Su --- Chairman Secretary & Legal Specialist

Doctor of law in University of Lancaster; Master of Laws, as well as the scholar of Civil and Commercial Law specialty in Shandong University. Proficient in Civil Law, Commercial Law, International Law, Economic Law, Intellectual Property Law, etc. both in Chinese and English. Responsible for contract review, investment and financing review and other relevant legal content.

Sprina Wang --- Global Business Head

Global token marketing expert, with proven successful cases. HMS, which was fully fund-raised with 30 M USD in 18 mins.

IHT global business Head, 35 M USD in total fundraising. Qfund global business VP, Wecash global marketing VP. More than 10 years' work experience in online marketing, product management and APP operation. More than 5 years' global internet and APP business operation. Hands on business operation on US, BR, EG, UAE, ID, IN, TH mar-

*IHT will not be used as the form of currency in the asset transactions. All of the transactions will be conducted under the asset's local fiat.

kets, have various qualified local market resources. Strategy maker and good team player. E-Marketing skills: Baidu SEM, Google SEM, Facebook Ads and page operation, data analysis, Google Play ASO.

Tony Xiang --- Director Of Business Development

5 years working experience as Dev role in Dell, Qihoo 360. Then start own company in USA for office supply product, support TOP 5 brand company as their main supply partner. Good at supply chain and 5 years E-Commercial business from 0 to top sales. Advanced member in several chamber of commerce. Have many connection in different area and government source.

Expert Advisors

YALE REISOLEIL

A private equity fund manager and quantitative trader, Mr. ReiSoleil co-manages Sichuan Hongjian Medical Fund, a ¥20 billion acquisition fund, and a cross-border high technology venture capital fund. From 2013 to date, Mr. ReiSoleil has developed several proprietary quantitative trading systems.

JOHN MCAFEE

He is the pioneer of network security and software innovation. In 1989, Mr. McAfee left Lockheed Martin and created the world's first anti-Virus Inc -McAfee Associates. Two years after the listing of McAfee Associates in August 2010, Mr. McAfee sold his remaining shares to Intel.

In 2016, Mr. McAfee on behalf of the Liberal Party ran for president of the United States as a candidate of the Libertarian Party.

Jiping Liu

In 1982 - 1986, he studied Library Management in the Department of Information Management at Shanxi University. He arrived in Shenzhen in 1988 and worked at HP; from 2000 - 2005, he took the position of manager of the Shenzhen branch of Baidu, after that serving as vice president of Baidu Inc.

Sergey Grybniak

Sergey Grybniak is the founder of Opportunity.com and Clever-Solution.com. Internationally recognized expert in digital marketing with international experience (USA, CIS, EU). He has over 500 successful projects under his belt. Mr. Grybniak is a serial entrepreneur and holds the IBA's 2017 Bronze Stevie award (Category: Executive of the Year - Advertising, Marketing & Public Relations). Experienced in SEO, PPC, and SMM, Sergey has provided counsel to multiple billion dollar companies and industry leaders. Sergey is a contributor to Search Engine Journal, Search Engine Watch and few other respected media.

Richard Wang
